

TRANSPORTATION

Transporting just about anything you can imagine

TRANSPORTATION

Macro Transportation is a division of Macro Oil Company, which has been a leader in the petroleum industry since 1929. Over the past four decades, Macro Transportation has built an unmatched reputation for

expertise in transporting various petroleum products nationwide. However, in recent years our company has expanded and diversified to serve a wide range of industries by providing specialized hauling and transportation services. From oversized loads to dry goods, concrete pylons and culverts to heavy machinery, drill pipe and giant jet fuel tanks – we have the resources and expertise to handle almost any type of hauling job quickly, safely and at competitive rates.

Macro Transportation has terminal locations in Broussard and Bossier City, LA and Beeville, TX. We are also strategically staged in Baton Rouge, New Orleans and

Houston, TX. We have the capabilities to haul fuel, equipment, materials and supplies throughout the United States, utilizing one of the largest fleets in the industry including flatbed trailers, drop deck trailers, RGN trailers and much more. We provide service 24/7 and 365 days a year – and all of our vehicles

are manned by experienced professionals and equipped with GPS tracking and navigation. In addition, Macro Transportation offers a team of highly experienced project coordinators to ensure that each job is handled smoothly, efficiently, on time and on budget.

Hauling generators to critical needs location

Our transportation division provides a wide range of equipment and services including:

Bulk Liquid Trailers – Macro has a fleet of 90+ bulk liquid trailers for transporting fuel, lubricants, antifreeze, petrochemicals and water. We have dedicated trailers for hauling aviation fuels such as Jet A and AvGas, as well as dedicated methanol hauling trailers. Our tanker trailers range in capacity from 7,500 gallons to 9,500 gallons. Macro has both single compartment and multi-compartment trailers. We also offer specialized mobile fueling trailers featuring self-powered pumping systems and up to 8 fueling points for vehicle refueling.

Flatbed Trailers – All of our flatbeds are equipped with pipe stakes, stripping material and a minimum of 12 four-inch straps. Our trailers are also equipped with pipe chocks and a minimum of eight sets of chains and ratchet binders. We do not use any type of lever binder. These trailers are 48' in length, 102" wide and have air ride suspension.

Drop Deck Trailers – Our drop deck trailers range from 48' to 53' in length and are 102" wide. These trailers are equipped with load levelers so a load can originate on the upper deck and be fully supported to the end of the trailer. There is a minimum of 12 four-inch straps and eight sets of chains and ratchet binders. Most trucks come equipped with tarps for moisture-sensitive loads.

Flatbed Extendable Trailers – These 80' extendable trailers are available for over-length loads. They come equipped with pipe stakes as well as chocks and a minimum of 12 four-inch straps, eight sets of chains and ratchet binders.

Drop and Hook Capabilities – When customers experience situations where loading time and yard traffic is a big issue, we can drop empty trailers at your facility to help you resolve this potential problem. These Macro trailers can be loaded at your convenience, usually overnight or on the weekends. When customer is ready, our power unit is dispatched to hook up the loaded trailer and immediately get the load on the road. This helps in two ways – by getting your product shipped faster, and by allowing our power units to operate more efficiently, which is more cost effective for your business.

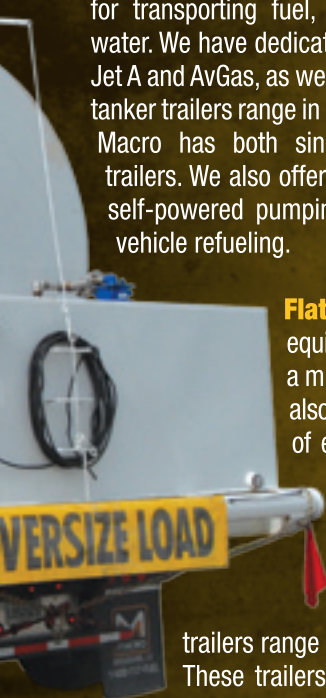

Heavy Haul Trucks – Our heavy haul trucks are four-axle tractors with Tulsa 64 winches and rolling tailboards. These trucks are equipped with snatch blocks for double lining, and roller pins for safe tailboard loading and unloading. We offer tandem axle jeeps as well as six-axle oilfield-style drop deck trailers with additional pin on axles. We can also achieve a 13-axle configuration for a gross weight of 254,000 lbs. In addition, we offer tri-axle drop deck trailers with rolling tailboards. All of our equipment is on air ride suspension and our trucks are equipped with half-inch chains and ratchet binders. Our drivers for this equipment have a minimum of five years of heavy haul experience and some have up to 15 years experience.

Vacuum Trucks – Our vacuum trucks have a capacity of 70 or 130 bbls. Each unit is self-contained and equipped with lighting for nighttime operations. These trucks feature 3" and 2" hoses, along with all available fittings including swedges from 4" to 2". Our vacuum and pumping services include professional collection, transportation and disposal of non-hazardous waste, sludge and salt water.

Haz Mat – Macro Transportation is a fully permitted and insured haz mat carrier with authority in all 48 contiguous states. We offer transport trailers capable of delivering full loads of fuel or chemicals on demand. All flatbed, drop deck and heavy haul equipment are haz mat-qualified as well. In addition, all of our drivers are TWIC certified.

Project Coordinators – We employ a staff of highly trained project coordinators who will work closely with you to ensure that your project runs smoothly and efficiently. Macro personnel are highly versed in all aspects of D.O.T. guidelines as well as local and state laws governing over-dimensional and haz mat loads. Our project coordinators can evaluate your potential project, make recommendations and provide price quotes that fit your needs and budget.

Dry Van and Refrigerated Trailers – Macro has 53' dry van trailers that will carry their dry freight efficiently and safely. Additionally, Macro can offer refrigerated trailers which are used to transport temperature-sensitive goods.
